- Privileged Access Management (PAM)
- Federation & Trust
- Customer Identity (CIAM)
- Non-Human Identity (NHI)
- Cloud Identity
- API & Service Identity
- AI & Agent Identity
- IoT / OT Identity
- Decentralized Identity
- Identity Operations & Assurance

CORE MESSAGE

Cloud, APIs, AI, Zero Trust, and third parties all depend on one thing: Trust in identity.

Technology changes. The question stays the same:
Who is requesting access, and should they have it?

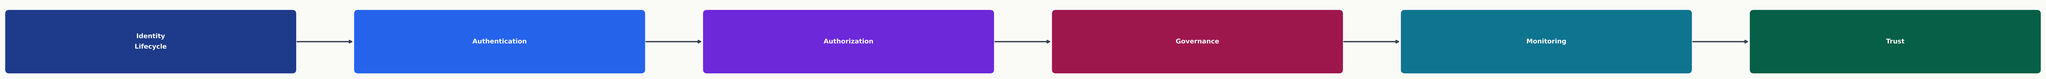
THE IDENTITY TRUST CHAIN



Version 1.0 | June 2026 · Balasubramani S.

I-TBOK is a practitioner-driven deep-dive reference architecture — Deep Dive #1 in the SA-BOK series — covering Identity & Trust across workforce, customer, machine, AI agent, and decentralized identity domains. Framework-agnostic and complementary to NIST 800-63, FIDO2, and OWASP.
